

Intern Assignment: Task Manager App

Build a simple **Task Manager** where users can manage tasks across three stages.

Requirements

Auth

- Login & Register flow

Tasks

- Create, update & delete tasks
- Every task has a stage — Todo, In Progress, Done

UI

- Clean & responsive design
- Handle loading & error states
- How you structure or display it is completely up to you

Tech Stack

Use **any framework or language** you are comfortable with.

Deployment

Layer	Deployment
Frontend	Mandatory (On any free hosting platforms)
Backend	
	optional & bonus

Backend

Backend implementation is optional unless AI tools were used during development.

If you used AI-assisted tools such as Cursor, Copilot, ChatGPT, v0, or similar tools for any part of the implementation, then backend development becomes mandatory.

Bonus Features (Optional)

- Custom backend APIs
- Database integration
- Backend authentication (JWT / Sessions)

Submission Requirements

- GitHub repository with a proper README
- Mention assumptions, tradeoffs, and technical decisions in the README
- Frontend live deployment link (Mandatory, **On any free hosting platforms**)
- Backend live deployment link (optional - On any free hosting platforms)

Timeline

- Expected effort: 3-4 hours
- Submission window: 3–4 days (Till 01st June, 10:00 PM)

We value a small, complete, and well-structured implementation over a large but incomplete solution.
